

Controlled Atmosphere Doors

Gas-tight doors for CA/ULO-Storage

Doors for cold-storage rooms

Every insulated door model manufactured by Repro can be made "gas-tight". This includes sliding, hinged or vertical sliding insulated doors. Whatever the application we can deliver all three models as "gas-tight" for installation into Controlled Atmosphere or Ultra Low Oxygen rooms.

The triple glazed, laminated glass, control hatch gives the customer the possibility to observe the ripening process from outside the room without affecting the pressure levels within. It is manufactured 800mm x 800mm as standard.

GRUPO
repro

All gas-tight doors are provided with special Cremone bolts, special gaskets and special frames which make the door completely air tight.

Each type of door has the following:

- Sliding and Vertical Sliding Doors: 6 No. Cremone bolts
- Glazed control hatch: 4 No. Cremone bolts
- Hinged doors: 2 No. Cremone bolts
